

## Spinach seed treated with VigorSeed

*VigorSeed is a fertilizer which contains Mn and Zn allowing us to offer a solution for our customers which enhances seed germination, promotes the growth and development of roots and can achieve a faster crop establishment.*

### Positive effects of VigorSeed:

- It gives an improvement in root growth and development which can achieve faster crop establishment.
- VigorSeed helps to create the optimal fertilisation for early plant development.
- Growers can reduce foliar application of VigorSeed by 1 dose (if using it already).

From 1st of June 2021: Our recommendation is to use one of the below seed treatments based on your knowledge of the field history and field conditions at sowing.

1. Maxim 480 FS
2. Maxim 480 FS + VigorSeed
3. Untreated + VigorSeed

**We are having promising results in initial trials with further trials taking place.**
